

Dell Virtual Storage Integrator (VSI) v8.6 UI Bug (Storage Systems | Hosts)

Navigate to **Storage Systems**. Expand a storage system and select **Hosts**.

Click on the column header **ESXi Host** (or ESXi Cluster)

Notice the arrow changes sort direction [between ↑ and ↓], but the **host_id** list order does NOT change (the host_id reference is pretty pointless as there is no cross reference; the actual ESXi host name would make far more sense here!)

The screenshot shows the vSphere Client interface with the 'Storage Systems' section expanded. The 'Hosts' tab is selected for the storage system 'mc-dusa-v-201a'. The 'ESXi Host' column header is highlighted with a red box, and the sort arrow is shown changing from up to down. The list of hosts remains in the same order.

Name	Model	Connect Status	Management IP	Owner
ESXi Host	ESXi Cluster	Connected	Secure	Administrator@VSPHERE LOCAL
Host_19	Management Cluster	10.10.1.21		
Host_23	Management Cluster	10.10.1.21		
Host_20	Workload Cluster	10.10.1.21		
Host_24	Management Cluster	10.10.1.21		
Host_21	Workload Cluster	10.10.1.21
